

Getting around effectively in 2030 should include:

- having safe and pleasant streets and places to walk in all of Boston's neighborhoods
- using timely, affordable and convenient public transportation
- getting to your destination quicker with more efficient traffic-flow
- using technology to get instantaneous and reliable information on travel choices
- readily available and welcoming transportation for people who live in, work in and visit Boston

In Spring 2014, Mayor Walsh appointed a Boston Mobility Advisory Committee with members representing residents, advocates, businesses, institutions and public agencies to work with the Boston Transportation Department to envision the city's long-term transportation future. GO BOSTON 2030

Imagining Our Transportation Future

Go Boston 2030 is a City of Boston initiative to envision a bold transportation future for Boston for the **next 5, 10 and 15 years**. The plan will develop a **far-reaching vision** that proposes transformative policies and projects to improve transportation for the city's residents, businesses and visitors. The two-year process will be **driven by data** and steered through an unprecedented and inclusive **public engagement** process.

Equity

The plan will strive for all Bostonians to have access to quality transportation that helps them reach jobs, education, health care, affordable housing, healthy food, culture and open space opportunities. Transportation options in every neighborhood should be accessible and safe.

Climate

The plan will work to reduce greenhouse gas emissions from transportation by reducing the number of miles driven per person and increasing the number of trips made without a car. Transportation infrastructure should be prepared for extreme weather events.

Economy

The plan will foster connections to employment, support development and neighborhood revitalization, and enhance growth of new industries like healthcare and technology start-ups.

Mayor Martin J. Walsh

Boston Transportation Department

GO BOSTON 2030

Imagining Our Transportation Future

Be part of **Go Boston 2030**! Big ideas for improvement don't come overnight. First comes a vision, and the City wants to hear from you. We're beginning with questions. What's your question about getting around Boston in the future?

The **Question Campaign** is designed to gather the voice of everyone in the city. People donate questions about the transportation and mobility issues that most affect their lives.

By providing your input, we will envision a transportation future that helps everyone who lives and works in Boston to get around effectively.

Starting in Fall 2014, there are many ways that you can share your ideas about how to plan for improved mobility in Boston in the future.

Winter 2016

Go Boston 2030

The process will begin with the Question Campaign, which will be used to understand what matters to residents and workers. The current conditions of the city's transportation system and the mobility needs of the neighborhoods will also be established.

A series of early action projects will be implemented to build momentum. Policies and projects will be proposed for active transportation, transit improvements, mobility hubs, and traffic congestion relief.

The final plan will be released in Spring 2016.

A bold long-term vision with specific benchmarks will be established using the data trends, the Question Campaign values, and a series of vision building forums.

While the plan is being finalized, a Mobility Lab and Mobility Index will be established to test and monitor improvements. These will continue after the completion of the plan.
